

Abizeyimana Victor Iradukunda

Engineering Manager · Platform Engineering · Digital Infrastructure · Distributed Systems

✉ svicky.shema@gmail.com | ☎ +250789032290 | 📍 Kigali - Rwanda | 🌐 <https://victor-abz.com>

Summary

Engineering Manager and platform engineering leader with 10+ years building digital infrastructure for government and enterprise service digitization. Progressed from Senior Software Engineer to Engineering Manager by translating policy, operational, and integration requirements into secure, configurable transaction platforms. Combines team leadership with hands-on depth in Java/Spring Boot, TypeScript, distributed systems, workflow automation, production reliability, and AI-assisted engineering.

Experience

Irembo Kigali City, Rwanda · Full-time · Hybrid
Engineering Manager September 2025 – Present

Lead multiple engineering teams delivering digital infrastructure for government and enterprise services across workflow automation, systems integration, data migration, and production reliability.

Core stack: Java, Spring Boot, TypeScript, Angular, React, PostgreSQL, Redis, Apache Pulsar/Kafka, Keycloak, Docker, Kubernetes, CI/CD, Model Context Protocol (MCP)

- Directed the digitization and production launch of 25+ government and enterprise services, then scaled change delivery and operational support across 75 live digital services.
- Strengthened platform stability by re-engineering Java/Spring Boot and Apache Pulsar event processing, introducing bounded PostgreSQL retention, and reducing the localization API failure rate by more than 99%.
- Accelerated service digitization by implementing a low-code/no-code form and workflow automation platform with schema validation, Model Context Protocol integrations, automated AI evaluation, and deployment automation.

<https://irembo.gov.rw>

Irembo Rwanda · Full-time · Hybrid
Senior Software Engineer March 2024 – September 2025

Progressed from government-service platform delivery into reusable low-code/no-code infrastructure for public- and private-sector workflows, then assumed engineering-lead scope in July 2025 before promotion to Engineering Manager in September.

Core stack: Java, Spring Boot, TypeScript, Angular, React, PostgreSQL, Redis, Apache Pulsar/Kafka, Keycloak, Docker, Kubernetes, GitLab CI/CD

- Shipped production releases across identity, justice, education-credential, civil-registration, and account-security workflows, with no resulting bugs or production incidents recorded.
- Implemented the first version of a low-code/no-code form and workflow automation builder with portable configuration.
- Digitized 15+ business-registration services by implementing configurable workflows, certificates, pricing rules, and client-ready service changes.

- Trained 10+ engineering interns in four weeks, published technical learning content, and developed competency assessments to expand delivery capability beyond the core team.
- Built reusable containerized deployment tooling, environment automation, white-label configuration, and demonstration stacks for international solution workshops.

The World Bank

Kigali City, Rwanda

Technical Support Consultant

February 2022 – June 2025

- Coordinated nationwide grievance-redress pilot preparation and monitored progress through weekly reporting and task-team communication.
- Customized and deployed grievance-redress systems across digital-government, public-health, and infrastructure programs, adapting each implementation to its operating context.
- Performed regression and usability testing and converted end-user feedback into configuration and deployment improvements.
- Developed localized training materials and trained technical and nontechnical users, including audiences in remote communities.

MUGANGA SACCO

Kigali City, Rwanda · Full-time · Hybrid

Director of Information Communication Technology

August 2022 – February 2024

- Led the development and rollout of USSD mobile banking and regulatory electronic data-warehouse reporting, expanding digital access and strengthening daily compliance reporting.
- Identified system weaknesses and implemented cost-effective improvements across digital financial services and IT operations.

<https://mugangasacco.rw>

MUGANGA SACCO

Kigali City, Rwanda · Full-time · Hybrid

ICT Manager

July 2021 – July 2022

- Authored the 2022–2024 IT and digital-financial-services strategy and established office infrastructure, operating procedures, cybersecurity controls, and disaster-recovery policies.
- Delivered an internet-banking portal covering member KYC, loan origination, and loan-appraisal workflows, plus internal project-management tooling.
- Managed core-banking implementation with external vendors, aligning requirements and delivery to complete the project on time and within budget.

<https://mugangasacco.rw>

BeneFactors

Kigali City, Rwanda · Contract

Software Engineer

July 2020 – February 2022

- Led five junior engineers through the upgrade and rollout of digital-financial applications, improving user experience and contributing to a 33% revenue increase within six months.
- Documented supported systems and applications to accelerate onboarding and knowledge transfer across the engineering team.
- Improved maintainability and service quality through defect resolution, user support, mentoring, and engineering standards.

Andela

Kigali, Rwanda · Full-time

Software Engineer

November 2019 – April 2020

•

Built a travel-management platform covering requests, budget preparation, and manager approvals using Node.js and React in a microservice architecture.

- Implemented scalable authentication and authorization with OAuth 2.0 and custom JSON Web Tokens and mentored software engineers across East Africa.

T-Kay Investment

Kigali City, Rwanda · Full-time

Graphic Designer

January 2017 – October 2019

- Delivered software, visual communication, and project-management solutions for agencies, design studios, and direct clients.
- Produced functional and design specifications, prototypes, and unit tests while managing software-delivery risks across the development lifecycle.
- Managed graphic-design, social-media, and search-engine-optimization initiatives that improved international branch visibility.

Inepu Ltd

Rwanda · Part-time

Co-Founder & CTO

July 2015 – December 2020

- Led an overhaul of the flagship SaaS hosting product, contributing to a 25% increase in customer satisfaction and a 14% sales increase within three months.
- Designed and developed a learning-management system with integrated lesson planning and certification.
- Designed and operated hosting infrastructure handling more than 5 TB of daily traffic and strengthened data-security controls across the company.

Projects

Internet Banking Web Portal

July 2021 - Present

- MUGANGA SACCO is an initiative by the Ministry of Health (MoH) aimed to increase the retention of medical doctors and other health workers by promoting saving and extending low-interest loans to them. I helped in the implementation, supervision, and deployment of the web portal by the development team.
- The platform manages the monthly savings of each healthcare professional and features the management of Loan origination, disbursement, and collection efforts. My role involved the coordination, implementation, and supervision of the software design specifications and development. The platform is expected to manage nearly 10,000 Medical professionals with around 5bn RWF in savings.
- Design, test and supervise the deployment of loan appraisal module (Loan eligibility) for the Web portal that assists in the primary evaluation of loans through the web portal before they are sent to the core banking.

Rosling - Financial Management Software

July 2020 - February 2022

•

In 2020, I designed and developed a robust system for benefactors, a non-deposit financial institution. The system equipped benefactors with various modules such as loan applications management, Loan disbursement, monitoring, and fees calculation. The app includes strict validation features and user validation from application approval to the amount being disbursed. It features also rich dashboards on loan performance. This software provides various reporting requirements such as CRB reports, BNR Reports and other reports directed to various internal request and management

- Development and deployment of AI robot to help track loan applicant performance on external systems such as credit bureau and public tenders (RPPA). This result in getting timely information of backlisted applicants and help in decision making
- I migrated big datasets from an old google sheet-based system to a new system without business disruption and onboard the team members to the new platform without business disruption.
- Currently, the project manages more than Rwf 5.6 million extended to various SMEs

Huza HR Management system

November 2021 - January 2022

- Lead development of a feature Rich dashboard for PesaChoice, the dashboard allows them to view business metrics in real-time such as loan performance and portfolio management. The System involves predictive analytics to predict trends based on historical data which gives an early warning system to Pesa Choice. I lead a team of developers, gather requirements, and supervise the project to stays on budget and on time.
- Designed a loan management system for PesaChoice. The system extends loans to various employees through an existing Payroll system. I lead a small team to design, deploy and maintain the system using agile methodology. Testing the product using Chai, Mocha, and Jest as well as automatic deployments using CI/CD. • The loan software actively helps PesaChoice to streamline and automate loan origination, processing, and supervising payments.
- The software also helps to keep track of the employee loans and repayment schedules.
- I designed and developed an ML-based credit(loan) scoring system for PesaChoice. The ML-based system allows PesaChoice to control its risk exposure through the selective allocation of loans based on the statistical analysis of historical customer data.
- The system correctly identifies high-risk customers with a high degree of accuracy of around 89%, which helps the company to better manage its credit risk.
- The system helps the company to improve its customer service by allowing it to provide loans to more worthy customers without spending much time on analysis. The number of customers served weekly increased by more than 45% since its deployment in January 2022.

Skills

</> Engineering Leadership

Expert

Engineering Management, Platform Engineering, Technical Leadership, Engineering Strategy, Team Leadership, Stakeholder Management

</> Digital Platforms & Architecture

Advanced

Digital Public Infrastructure, Government & Enterprise Digitization, Enterprise Platforms, Low-Code/No-Code Platforms, Workflow Automation, Distributed Systems, System Design, Microservices Architecture, Systems Integration, REST APIs, Fintech & Payments

</> Backend & Data

Expert
Java, Spring Boot, Node.js, Python, PostgreSQL, Redis

</> Frontend Engineering

Advanced
TypeScript, JavaScript, Angular, React

</> Infrastructure & Reliability

Advanced
Apache Pulsar, Apache Kafka, Event-Driven Architecture, Transactional Outbox, Keycloak, Docker, Kubernetes, CI/CD, AWS/Cloud, Observability, Site Reliability Engineering

</> AI-Assisted Engineering

Advanced
AI-Assisted Software Development, Model Context Protocol (MCP), AI Agent Integration, Schema Validation, Automated Evaluation Frameworks, Deployment Automation
